

The Modern **Web Interface** for
Citrix XenServer & XCP-ng Administration

Replace aging XenCenter with a futuristic, browser-based control plane that unifies pool, host, VM, storage, and network management — with built-in governance, telemetry, and credential security.

GOVERNANCE BUILT-IN

Role-based access, destructive-action approvals, pool quotas, and full audit trails. No bolt-ons required.

LIVE TELEMETRY

Built-in metrics collector with hourly rollups, capacity forecasting, and noisy-neighbor detection.

CREDENTIAL VAULT

AES-256-GCM envelope encryption for stored passwords. Key rotation. Zero plaintext exposure.

NO CDN, NO BLOAT

Single Node.js process. Local SQLite. All vendor assets self-hosted. CSP-safe. Runs anywhere.

CORE CAPABILITIES

• **VM Lifecycle**

Start, stop, reboot, suspend, resume, clone, copy, migrate (same-pool & cross-pool), import/export XVA.

• **Host Operations**

Maintenance mode with live VM evacuation, reboot, shutdown, real-time CPU/memory metrics.

• **Storage & Networking**

SR/VDI topology, VIF/PIF mapping, VLAN/bond visibility, network relationship panes.

• **Alert Center**

Telemetry + Xen alerts, acknowledgement, suppression, severity overrides, remediation task creation.

• **Lifecycle Compliance**

Desired-state tracking, drift detection, remediation templates, host maintenance posture.

• **Resilience & HA/DR**

Protection coverage, failover readiness, evacuation targets, recovery runbooks & drills.

• **Template Governance**

Version tracking, golden-image baselines, compare-and-promote workflows, deployment validation.

• **Activity & Logs**

Federated log center: audit, auth, alerts, tasks, telemetry. Export as JSON, HTML, or PDF.

• **Multi-Target Sessions**

Attach to multiple XenServer pools simultaneously. Switch targets without re-authentication.

• **Inventory Search**

Universal search across pools, hosts, VMs, SRs, networks, templates, alerts, and tasks.

• **Capacity Planning**

Memory pressure, storage commitment, top consumers, trend analysis, forecast thresholds.

• **Remediation Tasks**

Alert-to-task workflows, SLA tracking, templates with recurrence guards, audit coverage.

HOW XENMANGE COMPARES

Feature	XenMange	XenCenter (Citrix)	XenOrchestra (Vates)	VMware Aria Auto
XenServer/XCP-ng Native	✓	✓	✓	✗
Web-Based UI	✓	✗ Desktop only	✓	✓
Built-In Governance & RBAC	✓	✗	Basic ACLs	✓
Approval Workflows	✓	✗	✗	✓
Built-In Telemetry & Capacity	✓	✗	3rd-party add-on	✓ Requires Aria Ops
Credential Vault (Encrypted)	✓	✗	✗	vIDM
Lifecycle Compliance	✓	✗	✗	✓ Requires vLCM
Remediation Templates	✓	✗	✗	✗
No External Dependencies	✓ Single process	✗ vCenter required	XOA appliance	✗ Multi-appliance
Licensing	✓ MIT (Free)	Included w/ license	✓ AGPL (Free)	~\$350/core/yr VCF only
